

The artist's large artworks start life as intricate drawings before they are created on a grand scale in the landscape. She draws by hand using graph paper and maths to work out the measurements and design the patterns.

Agnes Denes is an environmental artist or land artist, she makes art with the landscape.

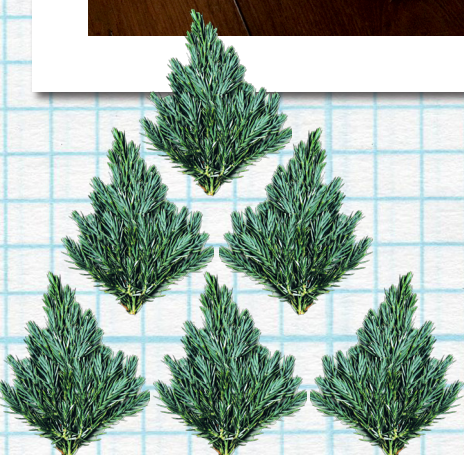

She planted a forest on unused land, and grew fields of grain in the middle of a city. She makes these artworks to help the environment and to leave a meaningful legacy.

Agnes is also known as a conceptual artist. She creates artwork with an idea or message.

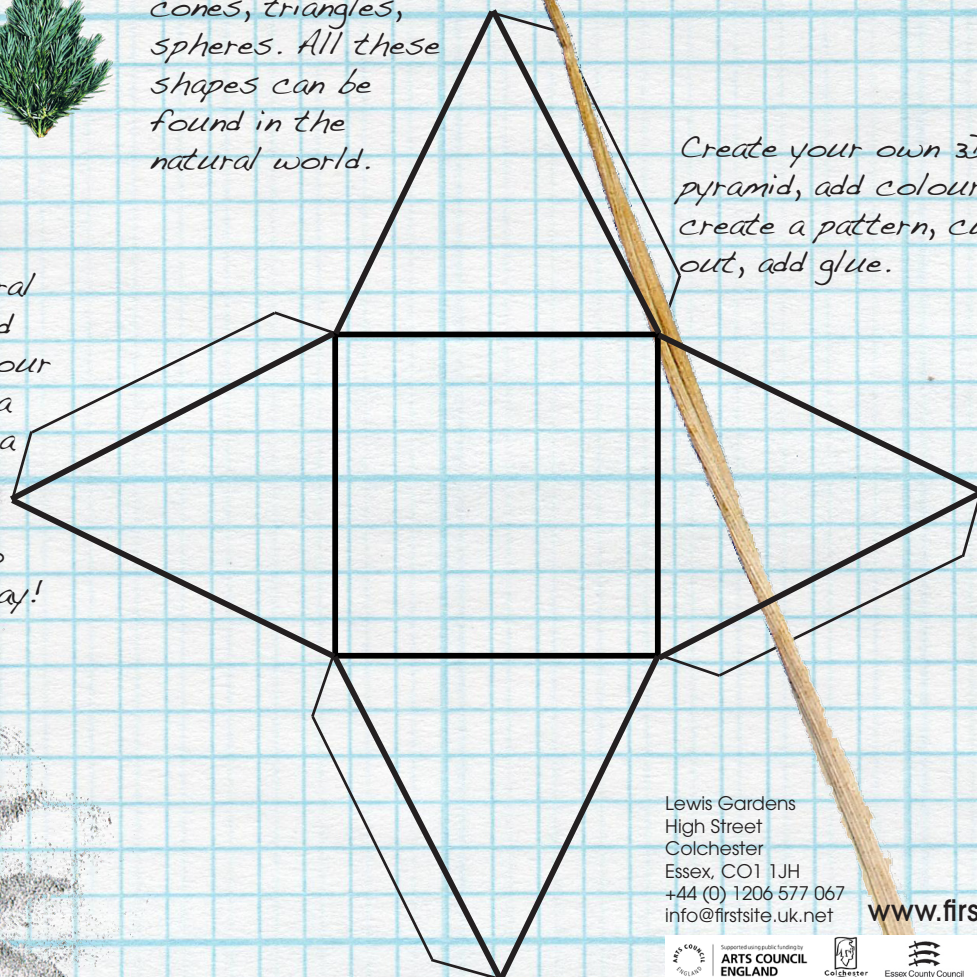

Create your own drawing system, use the graph paper on the other side of this sheet to work out your large scale artwork, or plot the trees in the D-shaped garden outside firstsite and join the shapes together to create new patterns.

Shapes and systems of shapes, units that build up to make a whole, lines, circles, pyramids, cones, triangles, spheres. All these shapes can be found in the natural world.

Agnes has made several pieces of work called 'body prints'. Make your own body print, use a pencil to scribble in a corner of this paper run your finger or thumb onto the lead and print away!

Create your own 3D pyramid, add colour, create a pattern, cut out, add glue.

# Agnes Denes Work 1967 - 2013 23 November 2013 - 9 March 2014
